

# Welcome to NRES 710

## Graduate Environmental Statistics

Fall 2020

### **Instructor**

Kevin Shoemaker

Office: FA 220E

Phone: (775)682-7449

Email: kevinshoemaker@unr.edu

Office hours: Wednesdays from 1 to 230pm via Zoom (and by appointment)

### **Course Meeting Times**

**Lecture:** M at 8am in DMS 103 (105 mins)

**Discussion/demo:** W at 9am in DMS 103 (45 mins)

### **Course Website**

<http://kevintshoemaker.github.io/NRES-710/>

### **Course Objectives**

Statistics are fundamental to the generation of scientific knowledge. In this course, students will learn basic principles of statistical inference and will gain experience applying these principles to questions in ecology and environmental science using the R environment for statistical computing. In this course we focus on the concepts and implementation and we generally leave the nitty-gritty stats questions to statisticians.

### **Student Learning Objectives**

Students will be able to:

1. Communicate, in writing or verbally, the assumptions associated with classical statistical models.
2. Understand and perform statistical tests such as T-test, ANOVAs, and linear regression.
3. Identify and perform appropriate statistical tests on data collected during their graduate program
4. Compare and contrast statistical tools and methods.
5. Import data, visualize patterns, interpret plots, and perform statistical tests using R.

## Prerequisites

Curious scientific mind, broad research interests, readiness to engage with equations and computer programming. Students are expected to already have a basic understanding of standard statistical concepts and methods, obtained through other coursework. If this is not the case, they should be prepared to work harder to develop the necessary prerequisite knowledge.

## Required materials

Students will use the open source statistical software R to perform analyses. Readings and handouts will be provided as appropriate. *All students should bring laptops to each class*; much of class time will be devoted to hands-on learning in R.

There are many good R books, but ultimately, most material can be found for free online. For the beginner in statistics or R, I recommend the following:

1. Discovering Statistics using R (Andy Field and Jeremy Miles)
2. Introductory R: A beginner's guide to data visualization, statistical analysis, and programming in R (Robert I. Kabacoff)
3. R Graphics Cookbook (Winston Chang). This book is available for free as a PDF online.
4. Qian, Song S. Environmental and Ecological Statistics with R, Second Edition, 2nd Edition. Chapman & Hall, 2017.

## Course structure

Instruction will consist of lessons on general statistical concepts and specific methods commonly used to address questions in ecology and environmental science. Stats lessons will include lecture-style materials, readings, demonstrations, exercises and class discussions.

There will be one midterm exam and one final project. The midterm exam will be based on stats lessons and will include both a traditional in-class exam and a take-home exam in which you will use R to make inference from provided datasets.

Homework assignments will occur throughout the semester. They are designed to provide you and me with progress assessments. Therefore, the frequency and subjects of the assignments will depend on the pace of progress during the semester.

The final project is designed to test your ability to understand and apply the tools that you have developed during the semester using R. The project will involve conducting a rigorous data analysis using statistical approaches that we have learned during the semester (or other tools as approved by the instructor). You can choose whichever statistical methods are suitable to your project scope and questions, but they must be methods we covered in class and appropriate to your data. Please turn in your own work and assignment, but you may use as many resources as you wish (class material, online material, or the insight/experience of other students) to generate the material presented. More specific instructions will come during the semester.

With roughly a month left in the semester, first drafts of your final projects will be due. These first drafts will then be subjected to anonymous peer review. At this time, the assignment itself will not be "graded," but the assignment will be reviewed by at least two other students, and the reviews will be graded. The reviews are designed to provide feedback on the statistical approach being used. For example, are the stats relevant to the data? Will the stats appropriate to the experimental design? The reviews will be due in one week and will be provided to the author for their consideration and assistance in their final project.

Given the nature of graduate classes, student participation is expected.

Grades will be assigned as follows (percentage is calculated as fraction of total semester score): Midterm exam: 20% Final project (including peer review): 40% Homework: 20% Overall class participation: 20%

## Grading

Course component	Weight
Midterm exam	20%
Final project	40%
Homework	20%
Participation	20%

Letter grades will be assigned as follows:

Grade	Semester Average (%)
A	100-94
A-	93-89
B+	88-83
B	82-75
C	74-60

## Course Schedule

NOTE: the course schedule is subject to change, so please check back frequently!

<http://kevintshoemaker.github.io/NRES-746/schedule.html>

## Make-up policy and late work:

If you miss a class meeting or lab period, it is your responsibility to talk to one of your classmates about what you missed. If you miss a lab meeting, you are still responsible for completing the lab activities and write-up on your own time. You do not need to let me know in advance that you are going to miss class or lab.

## Students with Disabilities

Any student with a disability needing academic adjustments or accommodations is requested to speak with the Disability Resource Center (Thompson Building, Suite 101) as soon as possible to arrange for appropriate accommodations.

## Statement on Academic Dishonesty

Cheating, plagiarism or otherwise obtaining grades under false pretenses constitute academic dishonesty according to the code of this university. Plagiarism is using the ideas or words of another person without giving credit to the original source; this includes copying another student in class. Always cite the source of your information. This includes copying or paraphrasing from a book, journal, or unpublished material without giving credit to the author(s), and submitting a term paper that was used in another course. Academic dishonesty will not be tolerated and penalties can include filing a final grade of “F”; reducing the student’s final course grade one or two full grade points; awarding a failing mark on the coursework in question; or requiring the student to retake or resubmit the coursework. For more details, see the University of Nevada, Reno General Catalog.

## **This is a safe space**

The University of Nevada, Reno is committed to providing a safe learning and work environment for all. If you believe you have experienced discrimination, sexual harassment, sexual assault, domestic/dating violence, or stalking, whether on or off campus, or need information related to immigration concerns, please contact the University's Equal Opportunity & Title IX Office at 775-784-1547. Resources and interim measures are available to assist you. For more information, please visit: <http://www.unr.edu/equal-opportunity-title-ix>"

## **Statement on Audio and Video Recording**

Surreptitious or covert video-taping of class or unauthorized audio recording of class is prohibited by law and by Board of Regents policy. This class may be videotaped or audio recorded only with the written permission of the instructor. In order to accommodate students with disabilities, some students may have been given permission to record class lectures and discussions. Therefore, students should understand that their comments during class may be recorded.

## **Statement on content accessibility**

This course may leverage 3rd party web/multimedia content, if you experience any issues accessing this content, please notify your instructor.

## **Statement on COVID-19 Training Policies**

Students must complete and follow all guidelines as stated in the Student COVID-19 Training modules, or any other trainings or directives provided by the University.

## **Statement on COVID-19 Face Coverings**

In response to COVID-19, and in alignment with State of Nevada Governor Executive Orders, Roadmap to Recovery for Nevada plans, Nevada System of Higher Education directives, the University of Nevada President directives, and local, state, and national health official guidelines face coverings are required at all times while on campus, except when alone in a private office. This includes the classroom, laboratory, studio, creative space, or any type of in-person instructional activity, and public spaces.

A "face covering" is defined as a "covering that fully covers a person's nose and mouth, including without limitation, cloth face mask, surgical mask, towels, scarves, and bandanas" (State of Nevada Emergency Directive 024).

Students that cannot wear a face covering due to a medical condition or disability, or who are unable to remove a mask without assistance may seek an accommodation through the Disability Resource Center.

## **Statement on COVID-19 Social Distancing**

Face coverings are not a substitute for social distancing. Students shall observe current social distancing guidelines where possible in accordance with the Phase we are in while in the classroom, laboratory, studio, creative space (hereafter referred to as instructional space) setting and in public spaces. Students should avoid congregating around instructional space entrances before or after class sessions. If the instructional space has designated entrance and exit doors students are required to use them. Students should exit the instructional space immediately after the end of instruction to help ensure social distancing and allow for the persons attending the next scheduled class session to enter.

### **Statement on COVID-19 Disinfecting Your Learning Space**

Disinfecting supplies are provided for you to disinfect your learning space. You may also use your own disinfecting supplies.

### **Statement on COVID-19, COVID-19 Like Symptoms, and Contact with Someone Testing Positive for COVID-19**

Students must conduct daily health checks in accordance with CDC guidelines. Students testing positive for COVID 19, exhibiting COVID 19 symptoms or who have been in direct contact with someone testing positive for COVID 19 will not be allowed to attend in-person instructional activities and must leave the venue immediately. Students should contact the Student Health Center or their health care provider to receive care and who can provide the latest direction on quarantine and self-isolation. Contact your instructor immediately to make instructional and learning arrangements.

### **Statement on Failure to Comply with Policy (including as outlined in this Syllabus) or Directives of a University Employee:**

In accordance with section 6,502 of the University Administrative Manual, a student may receive academic and disciplinary sanctions for failure to comply with policy, including this syllabus, for failure to comply with the directions of a University Official, for disruptive behavior in the classroom, or any other prohibited action. “Disruptive behavior” is defined in part as behavior, including but not limited to failure to follow course, laboratory or safety rules, or endangering the health of others. A student may be dropped from class at any time for misconduct or disruptive behavior in the classroom upon recommendation of the instructor and with approval of the college dean. A student may also receive disciplinary sanctions through the Office of Student Conduct for misconduct or disruptive behavior, including endangering the health of others, in the classroom. The student shall not receive a refund for course fees or tuition.
